ALIGNMENTS

RESULT 1 AAY56803 ID AAY56803 standard; Protein; 415 AA. XX

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

~

```
This represents a human protein C polypeptide having a light chain and a truncated heavy chain. The protein can be produced by standard recombinant methodologies. The truncated protein C is used to treat a wide range of thrombotic or vascular disorders or hypercoagulable states, e.g. stroke; myocardial infarction; unstable anglna; sepsis; adult respiratory distress syndrome; sickle cell anemia etc. The truncated protein C retains the activity of full-length protein C but does not undergo C-terminal cleavage, of the heavy chain, during activation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CGCAGCGGCTGGGAGGGCCGCTTCTGCCAGCGCGAGGTGAGCTTCCTCAATTGCTCGCTG 300

Protein C derivative for treating acute coronary syndromes, vascular occlusive disorders, thrombotic disorders and sepsis, comprises substitutions at specified amino acid positions

Claim 1; Page 43-44; 59pp; English.

molecules encoding such derivatives. These derivatives have increased molecules encoding such derivatives. These derivatives have increased sensitivity resistance to serpin inactivation and increased sensitivity resistance to serpin inactivation and increased sensitivity to thrombin activation compared to wild type protein c, and retains the biological activity of the wild type human protein C. Protein C derivatives are useful in the manufacture of a infarction and unstable angina; and disease states predisposing to thrombosis; vascular occlusive disorders and hypercoagulable states e.g. thalassagamia, sickle cell disease, viral heamorrhagic fever and permeability increasing protein; thrombolic disorders in combination with bacterial with an anti-platelet agent; protein C deficiency; acute arterial or peripheral arteries or in vascular grafts in combination with a corpustion, thromboembolism or stenosis in coronary, cerebral or peripheral arteries or in vascular grafts in combination with a corpus of thrombolytic agent. Nucleic acid molecules of the invention are useful or peripheral manns with genetically predisposed prothrombolic disorders or in vascular grafts in combination with a corpus of the invention are useful or peripheral experiments. The invention relates to human protein C derivatives and nucleic acid

```
The present sequence is that of human protein C mature polypeptide.

The invention relates to human protein C derivatives having at the invention relates to human protein C derivatives having at least 2 amino acid substitutions, and to recombinant DNA molecules encoding such derivatives. These derivatives have increased anticoagulant activity and resistance to inactivation by serpins activity of the wild-type protein. The amino acid substitutions are activity of the wild-type protein. The amino acid substitutions are selected from H100, 3116, 812K, 032E, N33D, N33E, and amino acids at selected from H100, 218, 249, 254, 302, or 316 of the mature protein c positions 194, 195, 228, 249, 254, 302, or 316 of the mature protein c positions in AAB82675-78. Also claimed are a vector comprising DNA given in AAB82675-78. Also claimed are a vector comprising DNA cercoally the novel human protein C derivatives. transformed host cells and a method of producing the human protein C derivatives.

The protein Gerivatives are useful for treating coronary and disease states predisposing to thrombosis (e.g. myocardial infarction and unstable angina), vascular occlusive myocardial infarction and unstable angina) to combination with an extended agent or by local delivery through an intracoronary catheters, protein C deficiency, acute arterial thrombotic catheters and parterial transfer protein correlations of acute of a coronary coronary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 181 AGCCIGTGCGGGCACGGCACGTGCATCGACGCATCGGCAGCTTCAGCTGCGACTGC 240

The present invention relates to a human protein C derivative. The protein is useful for treating vascular occlusive disorders.

Protein is useful for treating vascular occlusive disorders.

Coagulation, purpura fulminans, major tramma, major surgery, burns, cault respiratory distress syndrome, transplantation, deep vein thrombosis, heparin-induced thrombosytopenia, sickle cell disease, thalassemia, viral hemorrhagic fever, thrombotic thrombosytopenic thromboty to unstable and acute coronary syndromes such as myocardial infarction, unstable angina, and stroke. Protein C derivatives with inactivation by serpins when compared to wild-type activated human inactivation by serpins when compared to wild-type activated human creduce either less frequent administration and/or and hood and hence require either less frequent administration and/or saller dosage
                                                                                                                                                                                                                                                                                                                                                                                                      Protein C derivatives, useful for treating vascular occlusive disorder, hypercoagulable state, thrombotic disorder and disease states predisposing thrombosis, comprises specific amino acid substitutions -

The invention relates to a conjugate (I) comprising at least one non-compropertied moiety (II) (e.g. an N-glycosyl group) covalently attached to polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one converse and or at least one removed amino acid residue comprising an introduced and/or at least one removed amino acid residue comprising a cate). Also included are (1) a variant (IV) of (III) comprising a site). Also included are (1) a variant (IV) of (III) comprising a cubstitution in a position (P) where (P) is an amino acid with at least 25% of its side group exposed to the surface, with the proviso the substitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/Cry 71302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/Cry 71302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln (2) a nucleotide sequence (V) encoding His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding (IV); (3) an expression vector (VI) comprising (V) or (VI); (5) increasing (W); the functional in vivo half-comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-life or the serum half-life of a parent protein C polypeptide.

The conjugates, variants and protein C proteins are useful as medicaments, and in the manufacture of medicaments for the treatment (and medicaments, and in the manufacture of medicaments for the treatment companies (C) thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group
                                                                                                                                                                                     Human; Protein C; N-glycosylation; APC; activated protein C; zymogen; serum half-life; chromosome 2q13-q14; stroke; myocardlal infarction; after venous thrombosis; disseminated intravascular coagulation; DIC; sepsis; septic shock; embolism; pulmonary embolism; burn; pregnancy; bone marrow transplantation; major surgery; trauma; ARDS; coagulant; adult respiratory distress syndrome; alpha-1 antitrypsin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            158..169

```
shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow transplantation, burns, pregnancy, major surgery/trauma or adult crespiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 correased serum half-life, increased resistant to inhibitors, reduced increased serum half-life, increased resistant to inhibitors, reduced the conjugate offers a number of advantages over the currently available. The conjugate offers a number of advantages over the currently available administration of less protein, and fewer side effects. Moreover, a choiced anticoagulant activity is beneficial to reduce the risk of administration maintaining the antinflammatory activity of ARC (activated protein C) conjugates. This must be especially important when located on chromosome 2413-44. The present sequence represents zymogen protein C upon which the variants of the invention were based.

A claimed method for producing recombinant human protein C in the milk of a transgenic animal involves: (a) providing a DNA construct comprising DNA encoding a serretion signal and a protein C propeptide, operably linked to DNA encoding two-chain cleavage site-modified protein C, the 2 DNA sequences being linked to elements required for protein C expression in a mammary gland of a host female animal; and (b)

```

Recombinantly produced protein C can be used to treat thrombotic disorders such as venous thrombosis as it has anti-coagulant properties. The protein sequence is thought to yield two peptide chains; the first contains the Gla domain and growth factor domains and the second (the activation peptide) contains the catalytic

Grinnell BW, Yan SB;

Ehrlich HJ,

88EP-0312201. 87US-0138009. This is the protein sequence of nascent human protein C encoded by the DNA of AAN90187, which is derived from cDNA clones prepd. from human liver mRNA. It comprises the following regions: residues 1-42 are the signal peptide and propeptide of human protein C, important for directing secretion and propeptide of human protein C, important for directing secretion and protein C, insolutes 43-197, once post-cranslationally modified, constitute the light chain of both two-chain zymogen and activated forms of protein C; residues the two-chain zymogen and activated forms of protein C; residues 50 be removed (on basis of homology with 50 bovine protein C) probably by a 2 step process comprising a bovine protein C) probably by a 2 step process comprising a first cleavage (either between residues 197-8 or 199-200), first cleavage (either between residues 197-8 or 199-200), followed by carboxypeptidase or aninopeptidase action, to form 2 followed by carboxypeptidase or aninopeptidase action, to form 2 chain protein C; residues 200-211 constitute the activation activated heavy chain of the 2 chain form of protein C; zymogen, once 3 and the heavy chain of the 2 chain form of protein C zymogen, once 3 protein C; modified, and artivated heavy chain of active protein C; pr Protein C zymogen and activated protein C are regulators of haemostasis, differing from native protein C by increased sensitivity to activation by thrombin and thrombin, thrombomodulin even in presence of Ca ions) and longer in vivo half life. They are useful as on-demand antithrombotic agents, (replacements for heparin and hydroxycoumarins) and for treatment of hereditary heparin and hydroxycoumarins protein C deficiency states.

```
The sequence was deduced from a clone isolated from a cDNA library prepd. from mRNA from Hep G2 cells. It is a protein C precursor, including light and heavy chains, which is cleaved to produce activated protein C (see feature table). The DNA encoding the sequence can be manipulated by genetic engineering techniques to serpress a protein comprising (when activated) a heavy chain and a truncated light chain comprising residues 1-149, 1-150, 1-151 or 1-15.
                                                                                                                                  Pre-pro = pre-pro peptide of protein C with all/part replaced by the corresponding peptide of either protein S, factors VII, IX or X,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             61 ATCTGTGACTTCGAGGAGGCCAAGGAAATTTTCCAAAATGTGGATGACACACTGGCCTTC 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence, or a fragment of it, is used in the construction of hybrid phospholipid-binding proteins (PBP) having the same biological activity as human protein C or human activated protein C. The hybrid sequence would comprise at least one lipocortin phopholipid binding domain (PBD), e.g. of PAP-I, joined to a gla-domainless protein C or activated protein C. See AAQ12680-81 for such examples. See also AAQ12678-81.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          241 CGCAGCGGCTGGGAGGGCCGCTTCTGCCAGCGCGAGGTGAGCTTCCTCAATTGCTCGCTG 300

The cartivated protein can comprise one of 3 different truncated light chains, Ala(1) to Lys(150),Lys(151) or Arg(152). The activated HPC with a truncated light chain is more stable during storage. It can be administered for prophylactic and/or therapeutic treatments of disease states or injuries to enhance the patient's own anti-coagulative or fibrinolytic capabilities. See also W09109951

Human protein C (AAM02600) is a zymogen of a serine protease that plays an important role in the regulation of blood coagulation and the generation of fibrinolytic activity in vivo. It is synthesized in the liver and processed to a 2-chain molecule, which is itself converted to activated protein C. Protein C activated protein C are useful in the treatment of thrombotic activated protein C are useful in the treatment of thrombotic activated protein C are useful in the protein C are useful in the treatment of thrombotic c, modified protein C are useful from Hep G2 cells. Variant protein C, modified to improve cleavage between the heavy and light chains of the circulating intermediate, can also be produced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New DNA encoding modified forms of opt. activated protein C - and related transformed cells for prodn. of recombinant protein C for use e.g. as an anti-thrombotic agent

```
AA232159 to AA232194 represent reference alleles for specifically claimed nucleic acid sequences from the present invention which comprise from 92 bylymorphic sites as given in a table in the specification, selected polymorphic sites incleotide polymorphisms in which the nucleotide at the reference allele. The nucleic acids, and primers and probes, are used to especially polymorphisms, which may predispose an individual to disease, especially a vascular disease. They can also be used in phenotype analysis. AAX49550 to AAX49573 represent the proteins which correspond to some of the reference alleles.
                                                                                                                Human; coding sequence polymorphism; vascular pathology gene;
polymorphic site; phenotype correlation; forensic; paternity testing;
medicine; genetic analysis; vascular disease.

The invention relates to human protein C derivatives and nucleic acid molecules encoding such derivatives. These derivatives have increased anticoagulation activity, resistance to serpin inactivation and and configuration activity to thrombin activation compared to wild type increased sensitivity to thrombin activation compared to wild type protein C, and retains the biological activity of the wild type human protein C, and retains the biological activity of the wild type human c protein C. Protein C derivatives are useful in the manufacture of a medicament for the treatment of acute coronary syndromes e.g. myocardial infarction and unstable angina; and disease states predisposing to infarction and unstable angina; and disease states predisposing to infarction and unstable angina; orgalization (DIC), burns, transplantations, diseaminated intravascular coagulation (DIC), burns, transplantations, coameability increasing protein; transplantations, with backerial arterial states are activity increasing protein; thrombotic disorders in combination with a nati-platelet agent; protein C deficiency; acute arterial corpusation, thrombootism or stenosis in combination with a croparation with a corpusation or treating humans with genetically predisposed prothrombotic disorders for treating humans with genetically predisposed prothrombotic disorders corpusation with a present sequence is human wild type protein C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Protein C derivative for treating acute coronary syndromes, vascular occlusive disorders, thrombotic disorders and sepsis, comprises substitutions at specified amino acid positions
                                                                                                                                Human; protein C derivative; anticoagulation activity; thrombosis; serpin inactivation; acute coronary syndrome; myocardial infarction; vascular occlusive disorder; hypercoagulable state, angina; sepsis; disseminated intravascular coagulation; DIC; burn; transplantation; sickle cell disease; viral haemorrhagic fever; protein C deficiency; haemolytic uremic syndrome; acute arterial thrombotic occlusion; thromboembolism; prothrombotic disorder; gene therapy; thalassaemia.

The present sequence is that of human protein C prepro-polypeptide.

The invention relates to human protein C derivatives having at cheast 2 manno acid substitutions, and to recombinant DNA molecules encoding such derivatives. These derivatives have increased compared with wild-type human protein C but retain the biological activity of the wild-type human protein C but retain the biological activity of the wild-type protein. The amino acid substitutions are corpirity of the wild-type protein. The amino acid substitutions are copsitions 194, 195, 228, 249, 254, 302, or 316 of the mature protein C polypeptide substituted with Ser, Ala, Thr. His, Lys, Leu, Arg, C Asn, Asp, Glu, Gly or Gln (numbering relative to the protein C given in AAB2675-78. Also claimed are a vector comprising DNA cells and a method of producing the human protein C derivatives.

CC encoding the novel human protein C derivatives. Transformed host C syndromes and disease states predisposing to thrombosis (e.g. disorders and hypercoagulable states, sepsis (in combination with pathway inhibitor), thrombotic disorders (in combination with pathway inhibitor), thrombotic disorders (in combination with pathway inhibitor), thrombotic disorders (in combination with an occlusion, thrombombombolism, or stenosis in coronary, cerebral or genetically predisposed prothrombotic disorders may be treated by
                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel human protein C derivative for treating, e.g., myocardial infarction, unstable angina, sepsis, thrombotic disorders, acute arterial thrombotic occlusion, and thromboembolism -

Protein C derivatives, useful for treating vascular occlusive disorder, hypercoagulable state, thrombotic disorder and disease states predisposing thrombosis, comprises specific amino acid substitutions -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         inactivation by serpins when compared to wild-type activated human inactivation by serpins when compared to wild-type activated human protein C. They also have longer half-lives in human blood and hence protein c. They also have longer administration and/or smaller dosage require either less frequent administration and/or smaller dosage than wild type human protein C for treating disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a human protein C derivative. The present invention relates to a human occlusive disorders, protein is useful for treating vascular occlusive disorders, hypercoagulable states such as sepsis, disseminated intravascular coagulation, purpura fulminans, major trauma, major surgery, burns, coagulation, purpura fulminans, major transplantation, deep vein adult respiratory distress syndrome, transplantation, deep vein thrambosis, heparin-induced thrombocytopenia, sickle cell disease, thrambosis, heparin-induced thrombocytopenia, sickle cell disease, thrambosis, and hemolytic uremic syndrome, and also useful for treating purpura, and hemolytic uremic syndrome, and also useful for treating infarction, unstable angina, and stroke, Protein C derivatives with infarction, unstable angina, and stroke, Protein C derivatives with amino acid substitutions result in increased resistance to here.

His/Iys/Arg/Asn/Asp/Gilu/Gily/Gili (4) a nuclective (v): (3) an expression vector (VI) comprising (v): (4) a host cell (VII) (5) increasing (M2) the functional in vivo half-
comprising (v) or (VII): (5) increasing (M2) the functional in vivo half-
iffe or the serum half-life of a parent protein c polypebtide.

Iffe or the serum half-life of a parent protein c polypeptide.

The conjugates, variants and protein c proteins are useful as medicaments, and in the manufacture of medicaments for the treatment (and medicaments, and in the manufacture of medicaments for the exament (and medicaments).

C diagnosis/prevention) of stroke, myocardial infarction, after venous shock, emboll e.g. pulmonary emboll, transplantation such as bone marrow transplantation, burns, pregenancy, major surgery/traum or adult transplantation, burns, pregenancy, major surgery/traum or adult transplantation, burns, pregenancy, major surgery/traum or adult transplantation. The conjugates have an increased in vivo half-life, antitypsin. The conjugates have an increased in vivo half-life, antitypsin. The conjugates have an increased bioavailability.

CC renal clearance, reduced immunogenicity and/or increased bioavailability.

CC renal clearance including longer duration between injections, and fewer side effects. Moreover, a choise and protein of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of reduced anticoagulant activity is beneficial to reduce the risk of reduced anticoagulant activity is beneficial to reduce the risk of the conjugate has an extended plasma life. The gene for protein C is corrected on chromosome 2413-q14. The present sequence represents precursor

C; Comment: Factor Xa converts prothoromin to thrombin during blood clotting.
C; Comment: The two chains are formed from a single-chain precursor by the excision of C; Comment: The activation peptide is cleaved by factor IXa (in the intrinsic pathway)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        C;Comment: Calcium binds to the gamma-carboxyglutamic acid (Gla) residues and, with s C;Comment: The gamma-carboxyglutamic acid residues arise by a posttranslational, vita C;Genetics:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A years it is a position: 13934

A personal position: 13934

C; Function:

A personal position atalyzes the proteolytic activation of prothrombin to thrombin in the A; Peathway: blood coagulation

C; Superfamily: coagulation factor X; EGF homology; Gla domain homology; trypsin homology charants at a paral sequence #status predicted <SIG>
C; Keywords: beta hydroxyaspartic acid; blood coagulation; calcium binding; carboxyglu F; 1-15/Domain: Signal sequence #status predicted <SIG>

C.Function:
A.Description: catalyzes the proteolytic activation of coagulation factor X in the prese
gulation factor IX in the presence of calcium and tissue factor
A.Pathway: blood coagulation extrinsic pathway
C.Superfamily: coagulation extrinsic pathway
C.Superfamily: coagulation factor X; EGF homology; Gla domain homology; trypsin homology
F.1-152/Product: coagulation factor VIIa light chain #status experimental <MAl>
F.1-47/Domain: Gla domain homology (fragment) <GLA>
F.50-81/Domain: EGF homology <EGI>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   S

A; Title: A deletion located in the 3' non translated part of the factor IX gene responsation: 159612; MUID:94054330; PMID:8236150
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A.Molecule type: Protein
